

NVN 1100

Intelligent Video Analytic Solution

TeleEye

An Intelligent and Comprehensive Video Management Solution

NVN 1100 is an intelligent video analytic system which enables you a higher level of security protection. Under this system, people, vehicles, objects as well as their associated behaviors can be automatically recognized for surveillance purposes. Users can also set up conditions and define rules for the system to analyze the videos based on your instructions. Once the unusual or suspicious behaviors are detected, alert messages will then be sent to the users at once through the emails or apps, so that they can take immediate action to avoid or minimize the losses brought by the unexpected events. As a result, not only can they achieve a higher level of security, they can also save the manpower cost for supervision.

Simple and Compatible Configuration

NVN 1100 is simple and convenient to set up. Incorporating the technologies of analytic video output and network video encoder, it is compatible to both IP and Analog Systems. After rules are defined for the system through the management software tool, users only need to connect NVN1100 with TeleEye RX/ JN/ GX/ GN series DVR and AF/ MP4/ MQ22 series cameras, and it will do the video analysis intelligently. It is definitely your best helper in security and corporate management!

NVN 1100

Intelligent Video Analytic Solution

Essential Procedures For Accurate Event-Detection

1 Objects Identification

NVN 1100 can distinguish the categories of the objects, for example, people, cars, animals, objects etc. They can still be recognized even they are partially obstructed from view. Apart from the object categories, their associated behaviors can be intelligently recognized as well.

2 Path Tracing

NVN 1100 can trace the walking path of people as well as the driving path of vehicles. The management team can evaluate the behaviors of the people or vehicles based on their point-to-point movements. This also provides important clues for the investigation team when accidents happen.

3 Speed Detection

NVN 1100 can detect the speed of moving objects, including people and vehicles. Instructions can be set to the system to detect over speeding. Once speeding is detected, alert messages will be sent to the security centre so that the team can take immediate actions to avoid accidents.

Improving Analytic Performance and Alarm Accuracy

With the above means of intelligent analysis, loitering detection, intrusion detection and missing-object detection can be accurately recognized.

The video intelligence system helps reduce false alarms and greatly improves the accuracy of unexpected-event-detections. This allows you to take immediate responses to minimize further losses and it is definitely the best solution for your security!
